

Healthy Kitten Program

Designed to provide the most thorough care for the least cost

Vaccination program includes the following:

- * Initial examination
- * Additional office visits for:
 - 2 FVRCP/FELV vaccinations
 - 1 Rabies vaccination
 - 2 de-wormings with Pyrantel pamoate
- * 10% discount on surgical alteration @ 4lbs.
 - Ovariohysterectomy (spay)
 - Castration (neuter)

Total vaccination program fee: \$202.00 (payable upon initial visit - plus alteration charges at time of surgery)

Our Healthy Kitten Program is designed to provide maximum protection against the feline viruses that commonly affect kittens. We recommend vaccinating your kitten by beginning the series at 9 weeks with vaccinations at 3 week intervals. This series includes two vaccinations along with de-worming the kitten. The rabies vaccine is given when the kitten reaches 12 weeks of age.

We recommend spaying or neutering your kitten at 4 lbs of body weight. By doing so at this age you can generally avoid the onset of reproduction behavior.

After completion of the program a yearly booster vaccination is recommended for continued protection throughout your cat's life.

If program is pre-paid and not completed, charges revert to standard fees and fee paid in excess will be refunded.
